750 miles a

AND IN A S

NIGHT

into

DAY

NIGHT in Hawaii, at Waikiki Beach with its Diamond Head crater mountain.

The sky is dark and cloudy. The moon, barely showing.

Then, in a fractured second, night becomes day across the Pacific.

Waikiki is lit up by the fantastic flash from the American H-bomb blast, set off yesterday over Johnston Island 750 miles away to the south-west.

DAZED

It suddenly defined the skyline of Diamond Head, picked out the leaves on palm trees, dazed watchers.

The man-made day lasted just seven minutes.

"Dawn" came with a great gleam of white and green.

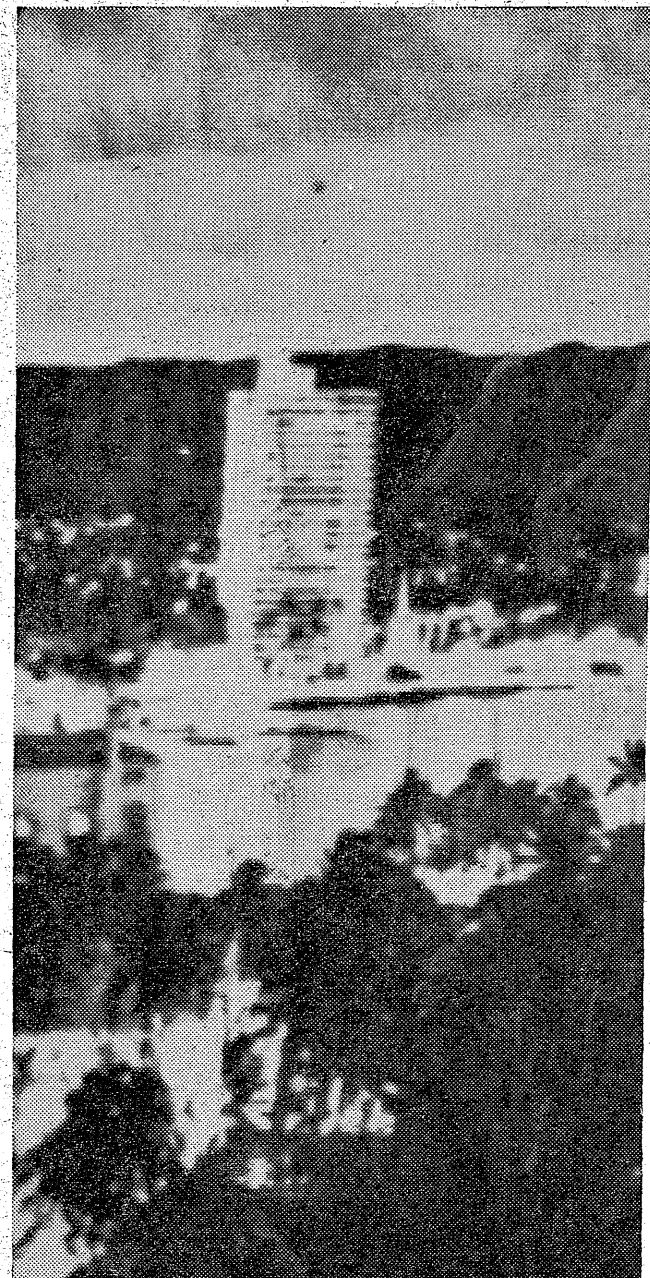

Then the sky reddened to pink, to rose, deepened to orange and, finally, blood red.

EERIE

That was the "sunset." The rainbow day was over. The clouds became a comfortable dark grey again.

Imagine somebody pushing a similar H-bomb button in Oslo—or near Vienna.

Londoners are 750 miles away. Night could be turned into eerie day for them, too.
